

EDUCATION

George Mason University — M.S. Data Analytics Engineering CGPA: 3.91 | Expected 2026

Relevant: Data Mining, NLP with Deep Learning, Bayesian AI, Big Data Analytics, Visualizations with R, Learning From Data

Beaconhouse National University — B.Sc. Computer Science 2023

Relevant: OOP, Data Structures, Artificial Intelligence, Data Science & Machine Learning

Certifications

Google Data Analytics Professional Certificate (Coursera, 2024) | IBM Certified Generative AI Specialist (Coursera, 2024) | Salesforce Administrator (In Progress)

TECHNICAL SKILLS

Languages:	Python, SQL, R, C++
Tools:	Tableau, Power BI, Spark, Hadoop, TensorFlow, Scikit-Learn, Pandas, NumPy, SciPy, Matplotlib, Microsoft Excel, Google Analytics, Jira, YouTrack, XCode
Techniques:	Random Forests, Logistic Regression, XGBoost, Neural Networks, NLP, A/B Testing, K-Means Clustering, RFM Analysis, RAG Systems, Prompt Engineering

WORK EXPERIENCE

Product Executive — Dubizzle Labs

Mar 2024 – Aug 2024

- Owned end-to-end product lifecycle for two products: a marketplace module and a greenfield product built from inception, designing UI mockups and UX flows and presenting directly to the CEO in weekly review sessions.
- Authored detailed Product Requirements Documents (PRDs) and user stories, translating stakeholder and CEO requirements into engineering tasks; managed sprint execution in Jira, improving development turnaround time by 22%.
- Led agile ceremonies and tracked engineering delivery for cross-functional teams, serving as the bridge between business requirements and technical execution.
- Analyzed user behavior and product metrics using analytics reports to guide feature prioritization across 5+ product launches.
- Conducted competitive pricing and market analysis across 10+ platforms; optimized product support workflows with engineering teams, cutting issue resolution time by 30%.

Business Analyst — Alivia Analytics

Sep 2023 – Mar 2024

- Served as primary client-facing liaison for the largest healthcare insurance agency onboarding in company history, leading stakeholder meetings and translating operational requirements into BRDs and User Specification documents delivered to development teams.
- Identified and documented fraud patterns in insurance claims data using SQL and Python analytics, contributing to \$2.7M in company savings.
- Analyzed business workflows and optimized onboarding transitions, reducing friction by 25%; collaborated across teams to design user-centered product features based on operational needs.

CAPSTONE & ACADEMIC PRODUCT EXPERIENCE

Scrum Master & Product Lead — Graduate Capstone Project, George Mason University

2025 – Present

- Serving as Scrum Master for a 5-person cross-functional team developing a full-stack product from scratch, running sprint planning, retrospectives, and daily standups.
- Authoring all user stories and tasks in YouTrack; tracking sprint velocity and delivery milestones end-to-end.
- Driving product roadmap decisions and translating academic research requirements into actionable engineering deliverables.

PERSONAL PROJECTS

RAG-Based Intelligent Q&A; System

- Built a Retrieval-Augmented Generation (RAG) system from scratch using Python, integrating vector embeddings, document chunking, and LLM-based answer synthesis.
- Applied prompt engineering techniques to optimize response accuracy and reduce hallucinations across domain-specific queries.

Customer Segmentation, Churn Prediction & Campaign Analytics

- Performed RFM analysis and k-means clustering on 50K+ customers to identify 6 actionable segments; built a Random Forest churn model achieving 86% accuracy.
- Designed a Tableau dashboard tracking campaign ROI improvement and conversion funnel metrics; translated insights into data-driven marketing and retention strategies.

Credit Card Fraud Detection & Financial Risk Dashboard

- Analyzed 280K+ transactions using SQL & Python to detect fraud patterns; built a logistic regression model achieving 91% recall for suspicious transactions.
- Developed a Power BI dashboard tracking fraud rate, risk scores, and geographic hotspots; defined audit-focused risk KPIs for financial risk assessment.

Public Sentiment Intelligence using NLP

- Collected and preprocessed social media text in Roman Urdu using tokenization, normalization, and stop-word removal; engineered linguistic features and built a sentiment classifier achieving 88% accuracy.
- Analyzed sentiment trends to extract actionable insights on public opinion and user perception despite highly non-standardized language input.
